

Loseplat by ITM plastic modular tiles, made of polypropylene, are characterized by their great versatility and the possibility of using them in indoor and outdoor areas.

Main characteristics:

- They can be used indoors and outdoors.
- They are made of polypropylene.
- They have a non-slip surface.
Prevent slips and falls.
- They turn wet surfaces into dry walkways to ensure people's safety.
- They avoid areas with puddles. Its design favors the water drainage and the stability of the piece.
- Assembly is very simple. They use a tongue and groove assembly system to facilitate their placement.
- In addition, plastic tiles can easily be cut with a saw to be adapted to the contours and elements present in the installation area.
- They renew the appearance of aged or worn floors.
- They resist the corrosion of chemical products. They are not deformed by cold or heat.
- They withstand sun and ultraviolet exposure.
- They have a thickness of 17 mm.
- They are easy to clean and maintain.

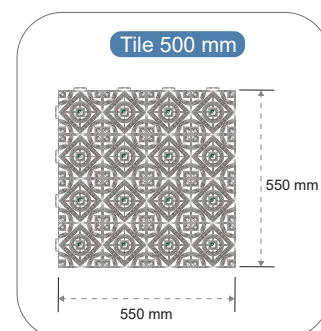

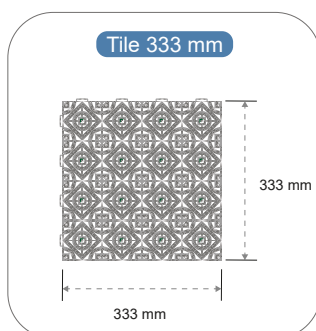

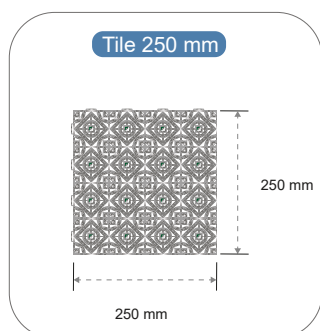

Our plastic tiles are suitable for all types of floors but they are especially useful for areas with high humidity.
